

VECON-CDI

Automated Container Damage Inspection Solution

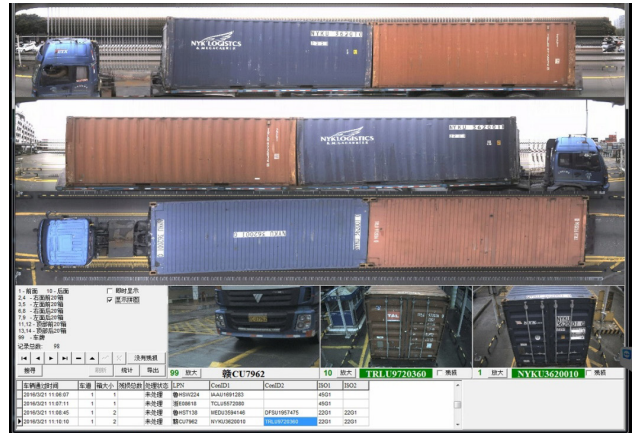

Empowered by the company's patented container number recognition technology, VECON-CDI is designed to capture high-resolution images of a container's panels so that the operator can investigate into damage for claims and disputes settlement.

This automated container damage inspection system will increase gate throughput and quayside performance.

KEY FEATURES

- Provide a full image of five container panels by automatically stitching images together
- Archive records of all container images at terminal gates/quayside
- Capture various angles and zooming levels
- Monitor automatic gate/quayside procedures remotely from a centralized office
- Expedite gate/quayside transactions processing
- Reduce paper work thus improve reliability and accuracy of data generation
- Minimize outdoor manual labor
- Reduce errors and safety issues

CREDENTIALS

- Da Chan Bay, Shenzhen, China
- Hairun Terminal, Xiamen, China
